

September 17, 2004 Alpharetta, GA, SlipStream Software the leading provider of root cause analysis for lean/process improvement for manufacturers has announced support of the OPC HDA standard for it's entire product line. OPC HDA allows for a common interface to plant historians and SCADA packages.

“With the release of PM Event Analyzer 2.0 and the announced support of OPC HDA we are responding to our customer requirements. We are seeing that our customer base is moving very rapidly to multiple data models that they wish to interface with in order to take full advantage of the modeling analytics that we provide in our root cause software. Our customers are telling us that because of the power of our root cause software they are now moving to interface to additional plant repositories so that they can see the entire picture of their process and make use of SlipStream’s root cause analytics.” Says Gary Hopkins, President and CEO of SlipStream Software.

SlipStream’s OPC HDA server interface is available immediately.
